CRUST BREAKER

High Speed Breaker Of Crusted Soil

The HAWKINS CRUST BREAKER is an inexpensive alternative to the rotary hoe for breaking crust. Double hinging action allows the HAWKINS CRUST BREAKER to float over clods, root balls, stubble and trash while maintaining an even down pressure. The pressure is easily adjustable to adapt to varying seed and crust conditions. Patented skid blades, made of chrome alloy material, slide through the crust, breaking it up without harming the sprout. Adjustable skid plates allow the unit to be used in corn as well as shallow planted crops such as sugar beets and sorghum. The clamp is built to fit most all tool bars from diamond to rectangular sizes.
